## Summary

MS Computer Science graduate with hands-on experience building and optimizing LLM-powered systems using DSPy and multi-agent frameworks. Combines enterprise-scale engineering from Oracle with applied AI research in semantic record linkage and autonomous agent workflows. Passionate about moving LLMs from prototypes to production.

## TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C++, SQL, JavaScript
- **Cloud & Databases:** Oracle Cloud, Azure Cloud, AWS, MySQL, PostgreSQL, SQL Server, MongoDB, Snowflake
- **AI & Machine Learning:** AI Agents, Multi-Agent Systems, LLMs, LlamaIndex, OpenAI API, Langchain
- **Frameworks & Development:** Django, Spring Boot, Node.js, .NET, React.js, Android Development, HTML, CSS

## EXPERIENCE

### Project 990

**Nov 2025 - Present**

#### *Applied AI Engineer*

*Bloomington, USA*

- Engineered ETL pipelines from scratch to ingest and process 518,000+ nonprofit financial records into database tables, implementing automated end-to-end workflows for scalable machine learning operations.
- Trained Label2Vec models for feature-based word matching across nonprofit records, enabling accurate record linkage through vector representations of financial terminology.
- Skills: Python, LLMs, Label2Vec, DSPy, NLP, Machine Learning, Data Pipeline Engineering, ETL, Neural Networks, Database Integration

### Oracle

**Jan 2023 - Aug 2024**

#### *Consultant Software Development Engineer*

*Bengaluru, India*

- Migrated legacy infrastructure to Oracle Cloud, reducing manual intervention by 35% through Python and JavaScript automation tools built to streamline enterprise workflows.
- Built and deployed an in-house automation platform that improved system reliability and accelerated engineering operations across multiple enterprise teams.
- Engineered interactive dashboards using Oracle Analytics Cloud (OAC) and automated data pipelines, strengthening reporting efficiency and enabling faster data-driven decision making.

#### *Analytics Intern*

- Developed Python-based automation scripts and utilities to streamline backend data collection and visualization workflows, increasing efficiency by 55%.
- Designed interactive dashboards to strengthen business intelligence, improving data-driven decision-making and supporting scalable engineering solutions.

### Arkverse Private Limited

**Oct 2022 - Jan 2023**

#### *Software Engineer Intern*

*Bengaluru, India*

- Designed and implemented REST APIs using Django and OOP principles, enabling efficient backend operations for mobile applications.
- Containerized and deployed backend services using Docker, improving release speed and system reliability.

## PROJECTS

### Rental Management System

**May 2025**

- Built a full-stack rental management platform with microservices architecture, integrating React.js frontend and Node.js middleware to deliver a scalable, modular system for seamless booking of houses, vehicles, and assets.
- Implemented RESTful APIs for authentication, listings, and transaction processing; deployed containerized services on Azure Cloud using Docker for enhanced scalability and reliability.

### AI Agent for Deep Research Workflow

**Aug 2025**

- Developed an autonomous AI agent with LlamaIndex and OpenAI's GPT-4o-mini, enabling intelligent prompt processing, knowledge retrieval, and multi-agent collaboration for scalable research tasks.
- Implemented a multi-step workflow of 3 specialized agents (research, writing, and self-reflection) in Python, enhancing adaptability, collaboration, and reliability of LLM-powered applications.

## EDUCATION

### Indiana University

**Aug 2024 - May 2026**

*Master of Science, Computer Science*

*Bloomington, USA*

- **GPA:** 3.89

### REVA University

**Aug 2019 - Jul 2023**

*Bachelor of Technology, Computer Science*

*Bengaluru, India*

- **GPA:** 9.36/10.0
